	Name	Circuit breaker for equipment	Implementatio n date	20181030

1 Application

NDB5 series circuit breaker for equipment (hydraulic-magnetic circuit breaker) is applied in electrical system, of which the rated current is from 0.5A to 63A and the rated voltage is AC230/400V, AC250V, AC480/277V (50/60Hz) or up to DC125V, to protect the circuit against the overload current and short-circuit current. It is also can be used to make and break the circuit infrequently. The product is widely used in computer and its peripheral equipment, industrial automation devices, telecommunication equipments, power supply for telecommunication, UPS equipments, railway-engine, marine electrical systems, aerospace electrical power system, elevator control systems and mobile power equipments.

Note:

- (1) The maximum rated current for 1-pole is 63A.
- (2) 1P + N, 3P and 3P+N breakers are only available for AC type breaker.
- (3) Parallel connected products only available for DC breakers. Furthermore, 2 pole parallel is minimum for 20A, the maximum for 100A; 3 pole parallel is minimum for 105A, and maximum for 150A
- (4) NDB5 series HMCB can attach with auxiliary and alarm contact;

File number	NDT500473	Edition	4 version	Implementation date	20181030
-------------	-----------	---------	-----------	------------------------	----------

There are two types of accessories available, auxiliary alarm contact and single auxiliary contact.

1: Auxiliary alarm contact is consisted by a set of auxiliary contact (1NO+1NC) and a set of alarm contact (1NO+1NC) .

2: Single auxiliary contact is consisted by a set of auxiliary contact (1NO+1NC);

Accessary is assembled on the right pole of circuit breaker

Auxiliary contact is used to indicate the breaking-closing status of circuit breaker;

Alarm contact indicates circuit breaker`s fault tripping status;

Auxiliary and alarm contact should be bought with circuit breaker.

NDB5 series circuit breaker for equipment with accessories products comply with CCC certification requirements.

(5) Above table lists are common types. The tripping curve, rated current, etc. can be made according to the client's requirements. Special type will be made for those products which are made according to client's requirement and won't be listed in the above table.

4 Main Specifications

Comply with standards: IEC/EN 60934, IEC/EN 60947-2, GB/T 17701, GB/T 14048.2, UL1077, UL489A

Rated working voltage: DC80V, DC125V, AC230/240/250V, AC400/415V, AC480/277V

> Frequency: 50/60Hz

6

Curve

Mechanical endurance: 10000 times (including electrical endurance: 6000 times)

Auxiliary/alarm contact technical parameters:
 Auxiliary contact: DC125V 0.5A, AC 250V 6A; Alarm contact: DC250V 0.25A, AC250V 5A;
 Mechanical & electrical life: 15000 times (electrical life 10000 times);
 Working frequency withstand voltage: 1500V;

Certificates: CCC, UL1077, UL489A, TUV, CE

> Cable Capacity: $0.5 \sim 25$ mm², up to 35 mm²(2P in parallel:), up to 70 mm²(3P in parallel)

- 5 Normal condition for operation
 - Altitude: ≤2000m
 - Ambient temperature:: -40°C~+85°C
 - Relative humidity: The relative humidity of the air does not exceed 50% at the maximum temperature of +40°C. Higher relative humidities may be permitted at lower temperature, e.g. 90% at +20°C.
 - Pollution degree: 2
 - Installation type: II
 - Service place should be without explosive media, gas and dust which are corrosive and conductive.
 - The product should be mounted free from rain and snow.
- 6 Tripping characteristic
- 6.1 Tripping times in second (tested under cold status)

8 Installation and operation requirements

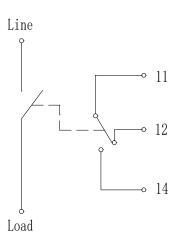

DIN Rail Installation. The breaker should be mounted within 5° of the mounting plane in case the characters of the product are affected.

Operation method : The product handle can stay in three position, which will indicate three working status of the product accordingly. When the handle stay in free trip position, the product handle should be turned off to the end of the switch off direction and kept at the position for at least one second firstly so that the machanism can be relatched. Then the product can be switched on to fulfill the function of loading and protecting. When the handle is at the switch off postion, the product can be switched on by turning the handle to fulfill the function of loading and protecting. When the handle is at the switch on positon, the product can be switched off either by turning the handle is at the switch off either by turning the handle to cut off the load or automatical tripping to

10、Accessory list and installation

10.1 NDB5 series HMCB can attach a pair of auxiliary contact and a pair of alarm contact at the same time. The terminal of auxiliary and alarm contact is pluggable connection strap. Please refer below picture. "11,12,14" are auxiliary contact number, "91,92,94" are alarm

10.2 NDB5 series HMCB can attach only one pair of auxiliary signal function, which terminal is pluggable connection strap.

Please refer below picture for auxiliary contact, "11,12,14" are auxiliary contact terminal number.

11 Packing and Storing

Max packing capacity (1P product: 12 pcs/box, 2P、1N product: 6 pcs/box, 2PU product: 3 pcs/box, 3P product: 4 pcs/box, 3PU product: 2 pcs/box, 3N product: 3 pcs/box; 1P product with accessary: 8 pcs/box, 2P、1N product: 4 pcs/box, 2PU product: 2 pcs/box, 3P product: 3 pcs/box, 3PU product: 2 pcs/box, 3N product: 2 pcs/box);

The product should be transited and deposited free from rain and snow. The products

File number	NDT500473	Edition	4 version	Implementation date	20181030
-------------	-----------	---------	-----------	------------------------	----------

should be stored in the warehouse where there are ventilation. The relative humidity there should not exceed 90% (20 ± 5 °C), and the ambient temperature there is between -40°C to +85°C. In addition, there should not be acidic, alkaline and corrosive gas in the air. The products should not be deposited more than 3 years in the above mentioned conditions since the producing date.

12 Safety notice

- 1) Do not disassemble the product with permission.
- 2) Attention to live part when the breaker is energized and avoid touching them.
- 3) Please make sure reliable connection to avoid fault tripping or terminal damager caused by exceptional heas resulting from unsuitable connection. During installation, the fasten torque of the body screw should be 2N.m, it should be 3.5 N.m fasten torque for the busbar screw of the two pole parallel product and 10 N.m for the three pole parallel product.
- 4) Please maitain the distance of 30mm from the arc jet slot of the product during installation to avoid short current.
