## KAPPA series

## 7 Functions

7 time ranges
1 change over contact, 1 normally open contact
Supply voltage 24 V a.c./d.c. and $110-240 \mathrm{~V}$ a.c.
Width 38mm
Installation design

Read and understand these instructions before installing, operating or maintaining the equipment.

Danger!
Never carry out work on live parts! Danger of fatal injury! The product must not be used in case of obvious damage. To be installed by an authorized person.

## Technical data

1. Functions

The function has to be set before connecting the relay to the supply voltage.

E ON delay
$R \quad$ OFF delay
Es ON delay with control input
Wu Single shot leading edge voltage controlled
Ws Single shot leading edge with control input
Wa Single shot trailing edge with control input
$\mathrm{Bp} \quad$ Flasher pause first

| 2. Time ranges |  |  |
| :---: | :--- | :--- |
| Time range | Adjustment range |  |
| 1 s | 50 ms | 1 s |
| 10 s | 500 ms | 10 s |
| 1 min | 3 s | 1 min |
| 10 min | 30 s | 10 min |
| 1 h | 3 min | 1 h |
| 10 h | 30 min | 10 h |
| 100 h | 5 h | 100 h |

3. Indicators

Green LED U/t ON:
Green LED U/t flashes:
Yellow LED R ON/OFF:
indication of supply voltage
indication of time period indication of relay output

## 4. Mechanical design

Self-extinguishing plastic housing, IP rating IP40
Mounted on screw terminal socket 11-pols in accordance with
IEC 60067-1-18a (type R11X or ES12)
Mounting position: any

## 5. Input circuit

Supply voltage:
24 V d.c.
24 V a.c. 110-240V ac

Pins S2(+) - S7
Pins S2-S7
Pins S2-S10
Tolerance:
24 V d.c.
24 V a.c.
110-240V a.c.

## Functions

## ON delay ( E )

When the supply voltage $U$ is applied, the set interval $t$ begins (green LED U/t flashes). After the interval $t$ has expired (green LED U/t illuminated) the output relay $R$ switches into on-position (yellow LED $R$ illuminated). This status remains until the supply voltage is interrupted. If the supply voltage is interrupted before the expiry of the interval $t$, the interval already expired is erased and is restarted when the supply voltage is next applied.

## OFF delay ( R )

The supply voltage $U$ must be constantly applied to the device (green LED U/t illuminated). When the control contact S2-S5 is closed, the output relay $R$ switches into on-position (yellow LED R illuminated). If the control contact is opened, the set interval t begins (green LED U/t flashes). After the interval $t$ has expired (green LED U/t illuminated) the output relay switches into offposition (yellow LED R not illuminated). If the control contact is closed again before the interval $t$ has expired, the interval already expired is erased and is restarted.

## ON delay with control input (Es)

The supply voltage $U$ must be constantly applied to the device (green LED $\mathrm{U} / \mathrm{t}$ illuminated). When the control contact S2-S5 is closed, the set interval $t$ begins (green LED U/t flashes). After the interval $t$ has expired (green LED U/t illuminated) the output relay $R$ switches into on-position (yellow LED $R$ illuminated). This status remains until the control contact is opened again. If the control contact is opened before the interval $t$ has expired, the interval already expired is erased and is restarted with the next cycle.

Single shot leading edge voltage controlled (Wu)
When the supply voltage $U$ is applied, the output relay $R$ switches into on-position (yellow LED R illuminated) and the set interval $t$ begins (green LED U/t flashes). After the interval $t$ has expired (green LED U/t illuminated) the output relay switches into off-position (yellow LED R not illuminated). This status remains until the supply voltage is interrupted. If the supply voltage is interrupted before the interval $t$ has expired, the output relay switches into off-position. The interval already expired is erased and is restarted when the supply voltage is next applied.

## Single shot leading edge with control input (Ws)

The supply voltage $U$ must be constantly applied to the device (green LED $\mathrm{U} / \mathrm{t}$ illuminated). When the control contact S2-S5 is closed, the output relay $R$ switches into on-position (yellow LED R illuminated) and the set interval $t$ begins (green LED U/t flashes). After the interval $t$ has expired (green LED U/t illuminated) the output relay switches into off-position (yellow LED R not illuminated). During the interval, the control contact can be operated any number of times. A further cycle can only be started when the cycle run has been completed.

## Single shot trailling edge with control input (Wa)

The supply voltage $U$ must be constantly applied to the device (green LED U/t illuminated). Closing the control contact S2-S5 has no influence on the condition of the output relay R. When the control contact is opened, the output relay switches into on-position (yellow LED R illuminated) and the set interval $t$ begins (green LED U/t flashes). After the interval $t$ has expired (green LED U/t illuminated), the ouput relay switches into off-position (yellow LED R not illuminated). During the interval, the control contact can be operated any number of times. A further cycle can only be started when the cycle run has been completed.

## Flasher pause first (Bp)

When the supply voltage $U$ is applied, the set interval $t$ begins (green LED $\mathrm{U} / \mathrm{t}$ flashes). After the interval t has expired, the output relay R switches into on-position (yellow LED R illuminated) and the set interval $t$ begins again. After the interval $t$ has expired, the output relay switches into off-position (yellow LED R not illuminated). The output relay is triggered at a ratio of 1:1 until the supply voltage is interrupted.

## Connections

24V a.c./d.c.

110-240V a.c.

## Ordering information

| Type | Functions | Supply Voltage | Part. No. |
